

P158 has 4 power level (P4 max burn rate, P2 medium burn rate and P1 the minimum burn rate).

P163 has 5 power level (P5 max burn rate, P2 medium burn rate and P1 the minimum burn rate).

Do not connect the room temperature probe in the rear of the unit to avoid the modulation based on room temperature.

Remember to wait the end of initial control phase before activating the forced draught at max speed in the chimney. It may cause an alarm based on the check of the pressure switch in off condition. (as you know we have a lot of safeties in our units)-
